

# WAIT TO TURN RATIO

 Example of a ratio for a child learning to wait, when presented with a highly motivating object

## What is the Wait to Turn Ratio?

The Wait to Turn Ratio is a tool for parents and educators to use when teaching turn taking and waiting skills. Depending on a child's ability to wait (dependent on the moment), or the level of motivation of a particular object, the wait time and turn duration (how long the child needs to wait and how long they have the object for) needs to be adjusted.
